Project Proposal

1. Project Description

1.1 Project summary

We are building a Campus Room & Equipment Booking System that enables students and faculty to search availability, request reservations, and manage bookings. The system solves the problem of double-booking, unclear policies, and inefficient manual approvals by providing a structured workflow with clear rules and audit trails

1.2 Stakeholders and users

Role	Needs / goals (simple bullets)
Student / Requester	Search rooms/equipment, request bookings, cancel/modify reservations
Staff / Faculty (Power User)	Request special spaces/resources, manage recurring bookings
Facilities Admin	Approve/deny requests, enforce policies, resolve conflicts

1.3 Scope and Vision

In scope	Out of scope
Room & equipment search	Payment/billing features
Reservation requests	External system integrations beyond mock APIs
Policy enforcement (time limits, permissions)	Full production deployment
Admin approval workflow	Advanced analytics beyond basic dashboard
Extension feature (one chosen by team)	Multiple extensions at once

2. Appendix : Team Formation

2.1 Team Leader Selection Process

We selected the Team Leader using a weighted decision matrix to ensure the choice is transparent, repeatable, and aligned with modern software project leadership expectations: predictable delivery, a clear collaboration framework, proactive risk management, strong stakeholder communication, and team enablement.

2.1.1 Selection Steps

1. Agree on criteria and weights (1–10): The team defined what matters most for this project and assigned a weight to each criterion (10 = most critical).
2. Independent scoring (1–5): Each team member scored each candidate on each criterion using the same anchors: 1 = weak, 3 = acceptable, 5 = excellent.
3. Average to reduce bias: For each criterion, a candidate's score was averaged across all team members.
4. Compute weighted totals: Weighted Score = Weight × Average Score; Total Score = Σ (Weight × Average Score).

5. Select leader and document result: The candidate with the highest total score was selected as Team Leader.
6. Tie-break rule: If totals were within 3%, priority was given to higher scores in Planning & Delivery Execution, Stakeholder Management & Status Communications, and Risk Management & Issue Ownership. Availability and commitment were then confirmed in a short discussion.
7. Integrity gate: Any serious ethics or academic integrity concern disqualified a candidate.

2.1.2 Leader Selection Criteria

Criterion	Weight (Max10)	Candidate 1	Candidate 2	Candidate 3	Candidate 4
1) Planning & delivery execution	10	4 to 40	5 to 50	3 to 30	2 to 20
2) Accountability & follow-through	9	3 to 27	5 to 45	4 to 36	2 to 18
3) Stakeholder management & status communications	9	4 to 36	5 to 45	3 to 27	2 to 18
4) Collaboration system & documentation hub	8	3 to 24	4 to 32	3 to 24	2 to 16
5) Risk management & issue ownership	8	3 to 24	5 to 40	3 to 24	2 to 16
6) Prioritization & scope control	8	3 to 24	4 to 32	3 to 24	2 to 16
7) Requirements clarity (testable outcomes)	7	3 to 21	4 to 28	3 to 21	2 to 14
8) Quality & testing discipline (evidence)	7	3 to 21	4 to 28	3 to 21	2 to 14
9) Technical leadership & integration	6	3 to 18	5 to 30	3 to 18	2 to 12
10) Team culture: feedback, mentoring, motivation	6	3 to 18	4 to 24	3 to 18	2 to 12
Total (Σ Weight x Avg Score)		255	354	243	156

Decision: Based on the weighted scores, **Candidate 2** was selected as Team Leader.

2.2 Team Agreement
